CASE NARRATIVE

I. Introduction

On May 22, 2008 TestAmerica received a request to prepare three sets of lead standards. A number of samples received prior to May 22, 2008 were combined into three separate composites. The composites were prepared as follows:

High Level Standard (sample ID J16W83) includes: J16MC0, J16MB9, J16DB6 & J16J62

Medium Level Standard (sample ID J16W84) includes: J16MD4, J16MC6, J16DL5, J16J65, J16MC7 & J16MC2

Low Level Standard (sample ID J16W85) includes: J16DC0, J16MC9, J16MC8, J16J63, J16DL3 & J16DX2

The composites were dried, ball milled overnight and sieved to remove any material greater than 2mm in size.

Five samples from each concentration were analyzed for lead by ICP.

The samples were assigned the following laboratory ID numbers;

WCH ID#	STLR ID#	MATRIX	DATE OF RECEIPT
J16W83-A	KNP0T-A	SOIL	5/22/08
J16W83 -B	KNP0T-B	SOIL	5/22/08
J16W83 -C	KNP0T-C	SOIL	5/22/08
J16W83 -D	KNP0T-D	SOIL	5/22/08
J16W83 -E	KNP0T-E	SOIL	5/22/08
J16W84-A	KNP00-A	SOIL	5/22/08

J16W84-B	KNP00-B	SOIL	5/22/08
J16W84-C	KNP00-C	SOIL	5/22/08
J16W84-D	KNP00-D	SOIL	5/22/08
J16W84-E	KNP00-E	SOIL	5/22/08
J16W85-A	KNP03-A	SOIL	5/22/08
J16W85-B	KNP03-B	SOIL	5/22/08
J16W85-C	KNP03-C	SOIL	5/22/08
J16W85-D	KNP03-D	SOIL	5/22/08
J16W85-E	KNP03-E	SOIL	5/22/08

II. Sample Receipt

The samples were received in good condition and no anomalies were noted during check-in.

III. Analytical Results/Methodology

The analytical results for this report are presented by laboratory sample ID. Each set of data includes sample identification information, analytical results and the appropriate associated statistical errors. The requested analyses were:

ICP Metals
ICP Metals by method SW-846 601

IV. Quality Control

SDG J00172 includes a Laboratory Control Samples (LCS) and one method (reagent) blank. A duplicate sample, matrix spike sample and a matrix spike duplicate sample was also analyzed. Any exceptions have been noted in the "Comments" section.

Blanks and LCS are reported in mg/L units, other QC and sample results are reported in the same units.

V. Comments

ICP Metals
Batch 8114551:
The matrix spike recovered low at 51% and the matrix spike duplicate recovered higher at 121%. The amount of spike added to the MS and MSD was insignificant in comparison with the amount of analyte in the sample. Except as noted, the LCS, batch blank, sample, sample duplicate, ICB, ICV, CCB and CCV results are within contractual limits.

Washington Closure Hanford
May 30, 2008

I certify that this Certificate of Analysis is in compliance with the SOW, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Manager, or a designee as verified by the following signature.

XRF LEAD FIELD STANDARDS

Three sets of standards should be prepared, low, medium, and high. We will provide the lab with a number of "containers" to fill and return.

- Prepare a high level sample by combing remaining material from samples J16MC0, J16MB9, J16DB6, and J16J62.
- Prepare a medium level sample by combing remaining material from samples J16MD4, J16MC6, J16DL5, J16J65, J16MC7, & J16MC2.
- Prepare a low level sample by combing remaining material from samples J16DC0, J16MC9, J16MC8, J16J63, J16DL3, & J16DX2.
- Mix thoroughly. If possible run on the "can roller" over night.
- Remove materials > 2mm in size.
- Analyze high, medium, and low level concentrations in quintuplicate (5 times) for total lead.
- Fill and return 5 samples each of the three concentration levels. Actual containers are still TBD but will be defined shortly.

Subject: FW: 618-7 Lead Totals Samples for XRF Confirmation
Attachments: XRF PB FLD STDS.doc

Sandra--
Rich has put together some directions on the making of the XRF lead standards.
Please give me a call if you have any questions.
Thanks.
Joan
